AMENDMENT

In response to the Office Action mailed on 10/02/01, please amend the above-identified application as follows:

In the Specification:

Please amend the following portions of the Specification as shown:

On page 7, lines 12-17:

As shown in FIG. 3, the testing module 10 connects both parallel port 21 and serial port 22 of the computer 20. The logic control unit 11 provides four [pair] pairs of 8-bit input/output ports for transmitting and receiving control or data signals. In other words, there are  $4 \times 8 = 32$  input/output lines for controlling and reading signals of all pins of the parallel port 21 and the serial port 22 and detecting the open or short circuit condition. The detailed connection of the pins and ports are shown
